

INFOSYS' DIGITAL WMS SOLUTION | NAVIGATING DIGITAL. MORE TOGETHER

Overview

Ever increasing digitalization in warehouse management space represents both an opportunity and a challenge. Our WMS offering is multidisciplinary, relevant and a set of comprehensive service that brings together flexible adaptive processes which can react quickly to supply chain changes. This is further enhanced by our best in class upgrade methodology across WMS products with upgraded tools developed by Infosys' WMS CoEs.

Futuristic Warehouse Solutions

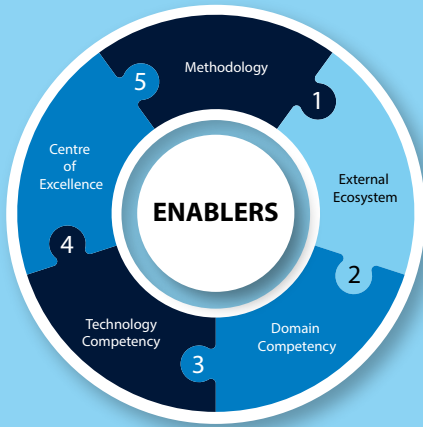

The warehouse of the future will be shaped by interactive and mobile technology, intelligent robots, big data analytics, plug and play automation. New technologies will significantly change the way goods are received, stored and shipped in a warehouse and will transform the supply chain. Keeping this in mind Infosys offers a HoloLens based picking solution. HoloLens based picking is a visual, paperless

picking system that can be used in diverse scenarios, opening newer dimensions in terms of mobility, flexibility and quality thereby reducing 20% of effort in picking.

A Warehouse Execution System (WES) - which is a combination of Warehouse Management System (WMS) and Warehouse Control System (WCS) - will impinge on the WMS territory when

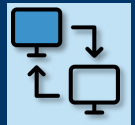

it comes to tasks related to wave management, light task management, inventory management (single channel), picking and shipping. Acknowledging this trend, Infosys has developed strategic partnerships with Intellegated™, VARGO™ and TGW Systems with a vision of creating one stop WM solution for an automated warehouse.

Infosys' Digital WMS Solutions

IMPLEMENTATION SERVICES

WMS Implementation / Roll out
Version Enhancements & User Training
Enhancement & Customization
Testing and Quality Assurance

CONSULTING SERVICES

Warehouse Process Consulting
Supply Chain Design/ DC Diagnostics
Package Evaluation/Selection
